1. TECHNICAL SPECIFICATIONS

1.1 GENERAL
The automatic backflushing AutoFilt® RF4 is a selfcleaning system for extracting particles from low viscosity fluids. Its robust construction and automatic backflushing capability make a major contribution to operational reliability and reduce operating and maintenance costs.
The slotted tube or SuperMesh elements in the filter with filtration rates from 25 to 1000 \( \mu \text{m} \) ensure highly effective filtration of contaminating particles from the process medium.
Automatic or manual cleaning starts as soon as the elements become contaminated.
The flow of filtrate is not interrupted during the backflushing procedure.
Two sizes allow flow rates of 40 l/min to 220 l/min.
The AutoFilt® RF4 is available as a fully automatic or purely manual version.
Numerous combinations of materials and equipment as well as individually adjustable control parameters allow optimum adaptation of the filter to any application.

1.2 OPERATION OF THE AUTOFILT® RF4 Filtration
The fluid to be filtered flows through the slotted tube filter elements of the backflushing filter, passing from the inside to the outside. Contamination particles then collect on the smooth inside of the filter elements. As the level of contamination increases, the differential pressure between the contaminated and clean sides of the filter increases. When the differential pressure reaches its pre set value, backflushing starts automatically.
1.3 SPECIAL FEATURES OF THE AUTOFILT® RF4
Isokinetic filtering and backflushing
The special conical shape and configuration of the filter elements allows even flow, resulting in low pressure drops and complete cleaning of the elements. The advantage: fewer backflushing cycles and reduced loss of backflushing fluid.

Pulse aided backflushing
The filter element to be backflushed remains in the flushing position for only a few seconds. Rapid opening of the backflushing valve generates a pressure surge in the filter element openings, providing an additional cleaning effect to the backflushing process.

Low backflushing quantities due to cyclic control
The backflushing valve opens and closes during backflushing of each filter element.

---

Triggering automatic backflushing
Backflushing is triggered automatically when the triggering differential pressure is exceeded. As soon as backflushing has been triggered, the filter starts to clean the filter elements.

Triggering backflushing on manual version
As soon as the visual clogging indicator responds, backflushing is started manually.

Backflushing of the filter elements - backflushing cycle
- The turning drive turns the element plate through an angle of 90°. This brings a clean filter element into filtration, and a contaminated filter element is positioned over the fixed flushing connection.
- The backflushing valve is opened.
- The pressure drop between the filtrate side and the backflushing line rinses a small partial flow of the filtrate in the opposite direction into the filter elements to be cleaned. The contamination particles deposited on the inside of the filter elements are detached and carried out via the rinsing arm into the backflushing line.
- After the "backflushing time per element", the backflushing valve is closed. In this way, all the filter elements are backflushed, one after the other.
A backflushing cycle is complete once all filter elements have been cleaned.
On the AutoFilt® RF4 with manual backflushing, the element plate including filter elements is turned and the backflushing valve is opened by hand.
2. FILTER SPECIFICATIONS

2.1. STANDARD CONFIGURATIONS

2.1.1 Control parameters
- EPT: electro-pneumatic cyclic control
- ET: electrical cyclic control (electric only)
- M: manual

2.1.2 Connection voltages
- 230 V AC main voltage
- 230 V AC or 24 V DC control voltage
  **Only for ET control versions:**
  - Control voltage 24 V DC, drive 3 x 400 V/N/PE, 50 Hz

2.1.3 Housing materials (combinations)
- Aluminium, anodised
- Stainless steel
- Carbon steel, nickel-plated

2.1.4 Material of internal parts
- Stainless steel

2.1.5 Material of elements
- Stainless steel

2.1.6 Backflushing valve
- Coaxial valve
- Stainless steel ball valve
- Ball valve, nickel-plated brass

2.1.7 Differential pressure monitoring
- Differential pressure switch with or without adjustment option

2.1.8 Filtration ratings
- 25 µm, 40 µm and 60 µm SuperMesh
- 30 µm to 1000 µm slotted tube

2.1.9 Electrical protection class
- IP54

2.1.10 Pressure ranges
- 6 bar (only stainless steel designs)
- 16 bar

2.1.11

2.2. OPTIONAL VERSIONS
There are a range of optional versions available for the AutoFilt® RF4. For technical details and prices, please contact our Technical Sales Department at Head Office.

2.2.1 Control/electrical components/voltage supply
- Special voltages
- Customised special solutions

2.2.2 Pressure ranges
- 25 bar

2.2.3 Filter elements
- Superflush element technology
- Elements with magnetic filtration technology

2.2.4 Documentation
- Manufacturer’s test certificates
- Material certificates
  3.1 according to DIN EN 10204
  And many others available on request
  Further optional models on request.

\(^{1)}\) related to EPT version

2.4 CIRCUIT DIAGRAM

CAUTION!
For cleaning, there must be a minimum pressure difference between the outlet and the backflushing line of 1.5 bar. The required pressure difference may be higher depending on the application.
### 3. MODEL CODE AUTOFILT® RF4

**Filter type**

- RF4-1 = AutoFilt® RF4, size 1
- RF4-2 = AutoFilt® RF4, size 2

**Control**

- M = manual
- EPT = electro-pneumatic control (incl. pneumatic drive)
- ET = electrical control

**Type of voltage**

- 0 = without control, without solenoid valve
- 1 = with control* and solenoid valve 230 V AC
- 2 = with control* and solenoid valve 24 V DC
- 4 = without control, with solenoid valve 24 V DC

  * Only for ET control:
  - 0C = without control*, drive 3 x 400 V/N/PE, 50 Hz
  - 1C = with control*, drive 3 x 400 V/N/PE, 50 Hz

  *other voltages on request!*

**Materials**

<table>
<thead>
<tr>
<th>Lower part of filter</th>
<th>Upper part of filter</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>AA = Aluminium ALMG3</td>
<td>Aluminium ALMG3</td>
<td>Only RF4-1, 16 bar</td>
</tr>
<tr>
<td>NN = Carbon steel, nickel-plated</td>
<td>Carbon steel, nickel-plated</td>
<td>Only RF4-2, 16 bar</td>
</tr>
<tr>
<td>EE = Stainless steel</td>
<td>Stainless steel</td>
<td>RF4-1, RF4-2, 6 bar</td>
</tr>
</tbody>
</table>

**Internal parts**

- E = Stainless steel

**Backflushing valve**

- 0 = without backflushing valve
- CO = coaxial valve, brass
- CON = coaxial valve, nickel-plated brass (only on request!)
- COE = coaxial valve, stainless steel (only on request!)
- KN = ball valve, nickel-plated brass (only on M or EPT control models)
- KE = ball valve, stainless steel (only on M or EPT control models) (only on request!)

**Differential pressure monitoring**

- 0 = without differential pressure monitoring
- 1 = fixed value: 0.5 bar, Type DS 32, N/O contact
- 2 = adjustable: 0.1 - 1 bar, Type DS 31, (N/O) contact
- 3 = fixed value: 0.5 bar, Type DS 32, N/C valve
- 4 = Adjustable: 0.1 - 1 bar, Type DS 31, N/C valve
- 5 = visual clogging indicator (only for manual version)
- 7 = fixed value 0.5 bar, Type GW, N/C contact

**Pressure range**

- 06 = 6 bar (housing fastened with clamp), only for housings in stainless steel design
- 16 = 16 bar (filter upper section threaded)
- 25 = 25 bar, only for RF4-1 (only on request!)

**Modification number**

- X = the latest version is always supplied

**Elements / filtration rating**

- M = For magnet technology, add M
- S = for Superflush, add S

For RF4-1:

- KMS = slotted tube 30 µm to 1000 µm
- KMD = SuperMesh 25 µm, 40 µm, 60 µm; other filtration ratings available on request

For RF4-2:

- KNS = slotted tube 30 µm to 1000 µm
- KND = SuperMesh 25 µm, 40 µm, 60 µm; other filtration ratings available on request

**Drawing number**

For special models

*Preferred versions are marked in bold!*

* Supply voltage of control 110 - 230 V AC, 50 Hz / 110 – 120 V AC, 60 Hz
It is crucial when operating the AutoFilt® RF4 that there is a differential pressure between the backflushing line and the filter outlet of at least 1.5 bar. This minimum pressure differential ensures the operation of the filter.

In order to be able to size the filter correctly, the following design data should be available:

- Flow rate
- Type of medium
- Materials/resistance
- Viscosity
- Required filtration rating
- Particulate loading in the fluid
- Type of contamination
- Operating pressure
- Power supply and compressed air supply
- Pressure ratios after the AutoFilt® RF4 (is there any back pressure?)
- Integration of the AutoFilt® RF4 into the whole system

The AutoFilt® RF4 is sized based on the pressure drop curve and, especially for emulsion applications, on the sizing table. Generally speaking, an initial Δp (clean filter condition) of 0.2 bar should not be exceeded.

The pressure drop curve is valid for filtration ratings of 100 – 1000 µm slotted tube and 25 µm, 40 µm and 60 µm SuperMesh. A further factor in the calculation is the flow velocity through the filter inlet. It should not exceed 4 m/s.

With reference to the sizing of AutoFilt® RF4, a separate consideration and sizing must be applied for water applications and emulsion applications due to different contamination loads (see 4.2 Cooling Lubricant Calculation Tables).

4.2.1 Water applications

<table>
<thead>
<tr>
<th>Fluid</th>
<th>Max. flow rate [l/min]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Water</td>
<td>RF4-1: 120 RF4-2: 220</td>
</tr>
</tbody>
</table>

The flow rate ranges indicated apply to filtration ratings ≥ 100 µm.

4.2.2 Cooling lubricants

Fluid: Emulsion

<table>
<thead>
<tr>
<th>Machined material</th>
<th>Type of machining</th>
<th>Max. flow rate [l/min]</th>
</tr>
</thead>
<tbody>
<tr>
<td>aluminium</td>
